PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with hands-on expertise in the MEAN stack (MongoDB, Express.js, Angular, Node.js), RESTful API design, and backend systems engineering. Proven track record of delivering production-grade features — including a 70% reduction in API response time via Redis caching and MongoDB indexing. Strong Computer Science fundamentals in DSA, OS, DBMS, and Networking. Seeking Full Stack or Backend Developer roles at product-based companies.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Java, TypeScript, HTML5, CSS3

Frontend: Angular (Components, Services, Routing, Forms, Lazy Loading), Bootstrap, Responsive Design

Backend: Node.js, Express.js, RESTful API Development, JWT Authentication, Refresh Token Rotation, Nodemailer

Database: MongoDB, Mongoose ORM, Aggregation Pipelines, Indexing, Redis (Caching)

CS Fundamentals: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, OOP

Tools & DevOps: Git, GitHub, Postman, VS Code, Docker (Basics)

EXPERIENCE

Junior Developer Intern

March 2026 – Present

IEST Federation

connectbharat.org

- Developed and maintained production full-stack web applications using the MEAN stack (MongoDB, Express.js, Angular, Node.js)
- Engineered RESTful APIs with Node.js and Express.js, implementing JWT authentication and role-based access control for secure endpoints
- Reduced API response time by 70% by implementing Redis caching and MongoDB indexing strategies on high-traffic endpoints
- Built reusable, responsive Angular UI components improving cross-device compatibility and overall user experience
- Performed code reviews, debugging, and performance profiling; managed feature branches and pull requests using Git

PROJECTS

JWT Authentication & Authorization System | *Node.js, Express.js, JWT, Nodemailer, MongoDB*

[Repo](#)

- Designed and implemented a secure backend auth system with JWT Access Token and Refresh Token rotation to prevent token hijacking
- Built role-based access control (RBAC) middleware to enforce granular API endpoint permissions across user roles
- Integrated Nodemailer to automate transactional emails (registration confirmations, password reset flows)
- Followed RESTful API design principles with structured error handling and input validation

TODO Application | *MEAN Stack — MongoDB, Express.js, Angular, Node.js*

[Repo](#)

- Built a full-stack task management application with complete CRUD operations and a clean RESTful API backend
- Architected modular Angular frontend with reusable components, reactive forms, and service-based state management
- Implemented clean separation of concerns with MVC architecture on the backend for maintainability and scalability

EDUCATION

Master of Computer Applications (MCA)

2024 – 2026

Relevant Coursework: Data Structures & Algorithms, DBMS, Computer Networks, Operating Systems

B.Sc. (Hons.) Computer Science

2021 – 2024

ACHIEVEMENTS

- Achieved 70% API response time improvement in production using Redis caching and MongoDB indexing at IEST Federation
- Built and deployed multiple full-stack projects demonstrating end-to-end ownership from database design to UI
